

Project Executable Files

Date	03 JULY 2026
Team ID	XXXXXX
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	No(I used csv datasets)
5	Environment configuration file (.env.example or similar)	No(No environment variables are used)
6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable for mobile/desktop apps)	No(This is a Flask web application)

8	Dockerfile / Containerization config (if applicable)	No(Docker is not used)
9	Test files and test results	No(I uploaded result screenshots)
10	Demo video or walkthrough (if required)	Yes

Step 2: Files / Folder Structure

Provide an overview of your project's file and folder structure below

```
Credit-Card-Approval-Prediction-Code-File/
├── app.py
├── Credit_Card_Approval_Prediction.ipynb
├── README.md
├── requirements.txt
├── credit_card_approval_model.pkl
├── scaler.pkl
├── gender_encoder.pkl
├── car_encoder.pkl
├── realty_encoder.pkl
├── income_encoder.pkl
├── education_encoder.pkl
├── family_encoder.pkl
├── housing_encoder.pkl
├── occupation_encoder.pkl
├── templates/
│   └── index.html
├── dataset/
│   ├── application_record.csv
│   └── credit_record.csv
├── screenshots/
│   ├── home_page.png
│   └── prediction_result.png
└── ...
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not deployed
Login (Demo)	Not required
Platform / Hosting Provider	No

Repository Link	https://github.com/NarnamangalamBhumika/Credit-Card-Approval-Prediction-Code-File
Demo Video Link	https://1drv.ms/v/c/146fe7fb98a01902/IQCrhShDcpDWTLbdzDqLZ359Ae5TVA-NzfLOKkhDg1SmjtXE?e=VmEnxE

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

- Python 3.10 or later
- Jupyter Notebook
- Visual Studio Code (Recommended)
- Flask Framework
- Required Python Libraries (requirements.txt)
- Windows 10/11 or any operating system supporting Python

Step 1: Clone the repository:

```
git clone <Your GitHub Repository URL>
```

Step 2: Install the required dependencies:

```
pip install -r requirements.txt
```

Step 3: Ensure all project files are available in the project directory, including the trained model (credit_card_approval_model.pkl), encoder files, scaler file, and the templates folder.

Step 4: Open the project folder in Visual Studio Code or any preferred IDE.

Step 5: Start the Flask application:

```
python app.py
```

Step 6: Open a web browser and navigate to:

```
http://127.0.0.1:5000/
```

or

```
http://localhost:5000/
```

The Credit Card Approval Prediction web application is now ready to use. Enter the applicant details and click **Predict** to view the prediction result.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Prediction accuracy depends on the quality and completeness of the input data.	Users should provide accurate and complete information for better predictions.
2	The application currently runs only on a local machine and is not deployed online.	Can be deployed on platforms such as Render, AWS, or Azure in the future.

3	The model is trained on a specific dataset and may not generalize well to all real-world scenarios.	The model can be retrained periodically with updated and larger datasets to improve performance.
