Project Name	Credit Card Approval Prediction
Maximum Marks	2 Marks

Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	Customer (Applicant): A person who submits personal, financial, and credit-related information to apply for a credit card and receives the approval or rejection result.
Rectangle with numbered header	Process	Credit Card Approval Prediction: Collects applicant details, preprocesses the data, applies the trained machine learning model, and predicts whether the credit card application should be approved or rejected.
Rectangle (solid fill, no number)	Data Store	Application & Credit Database: Stores applicant information, credit history, and other relevant data used by the prediction model.
Labeled arrow	Data Flow	Applicant Details → Prediction Model → Approval/Rejection Result: Shows the flow of data from the customer to the machine learning model and back to the customer as the prediction result.

Example

The diagram below illustrates how the symbols above come together to form a complete data flow diagram.
