

Technology Stack

Date	28 JUNE 2027
Team ID	XXXXXX
Project Name	Credit Card Approval Prediction
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	HTML, CSS	Used to create a simple, responsive, and user-friendly interface for entering applicant details and displaying prediction results.

2	Backend / Server-Side	Python, Flask	Flask connects the web interface with the trained machine learning model and processes prediction requests efficiently.
3	Database / Data Storage	CSV Files (Application Record & Credit Record)	The project uses CSV datasets to store applicant information and credit history for training and testing the model.
4	Cloud / Hosting / Deployment	Flask Local Server	Used to deploy and test the application locally during development in a simple and cost-effective manner.
5	Version Control & CI/CD	GitHub	Used to manage project versions, store the source code, and enable collaboration and project sharing.
6	Third-Party APIs / Other Tools	Jupyter Notebook, VS Code, Scikit-learn, XGBoost, Pandas, NumPy	Used for data preprocessing, model training, evaluation, visualization, and application development.
